1.2. Add a Custom 404 error page	3
1.3. Edit feature settings	5
1.4. Testing customized error 404 page.....	6

1. Task#3(Custom 404 error page in IIS on Windows 11):

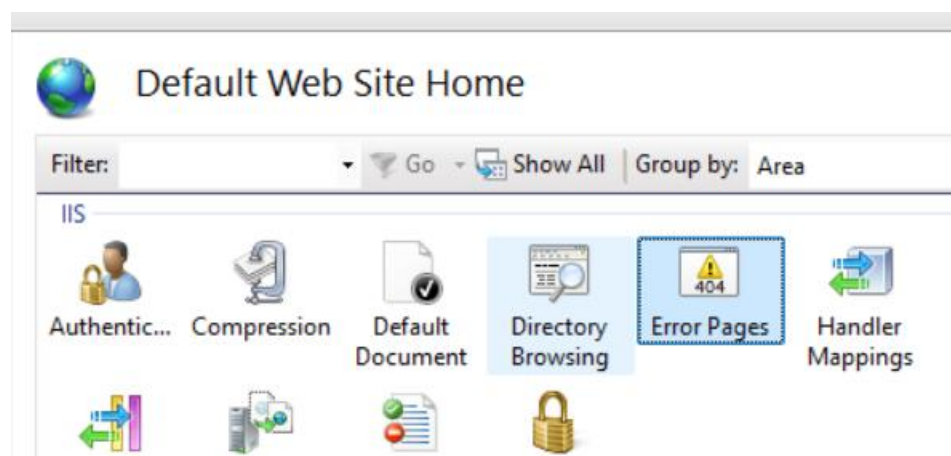

1.1. Launch IIS Manager

- Initially Open Start Menu and Launch IIS Manager. In the Connections pane (left side), expand your server's name. Under Sites, find the website you want to add the custom 404 error page for and select it.

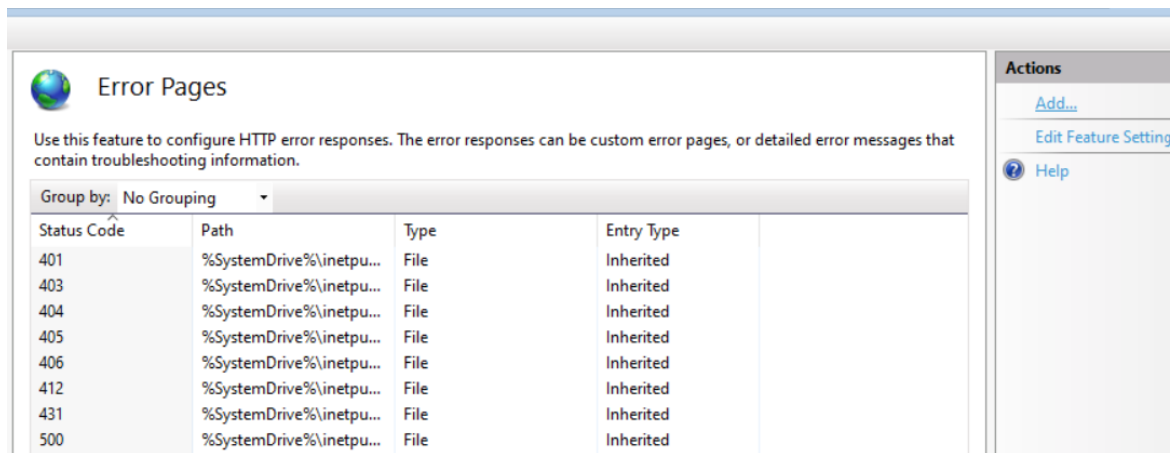

1.2. Add a Custom 404 Error Page

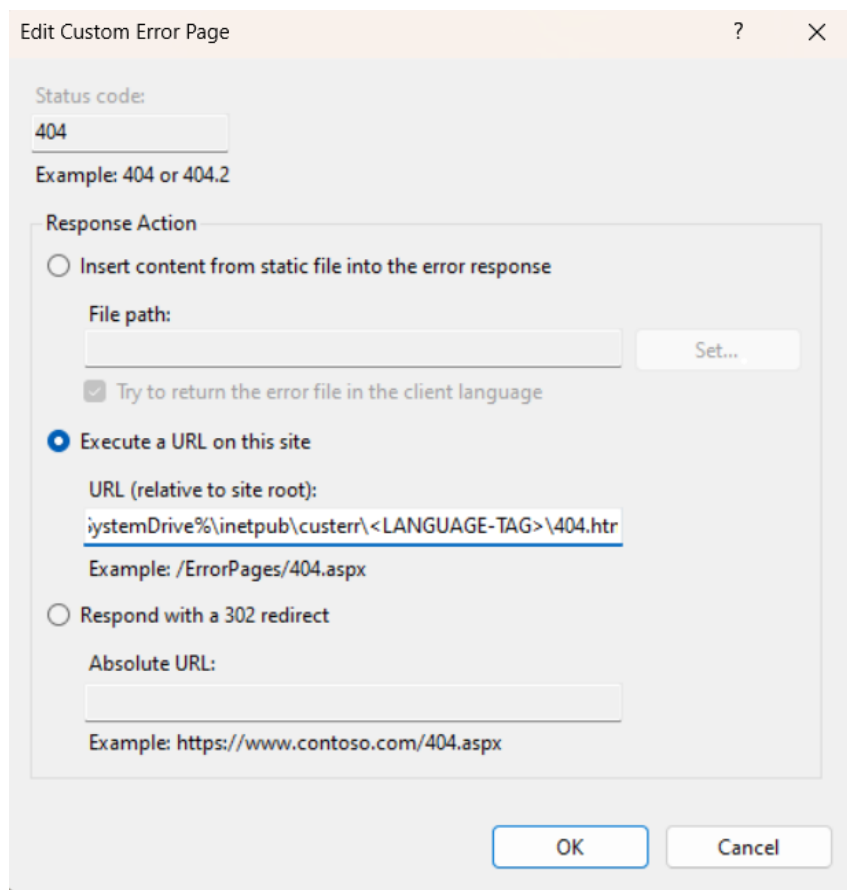

- In the Features View and double-click Error Pages.

- In the Actions pane, click Add... to add a new error page.

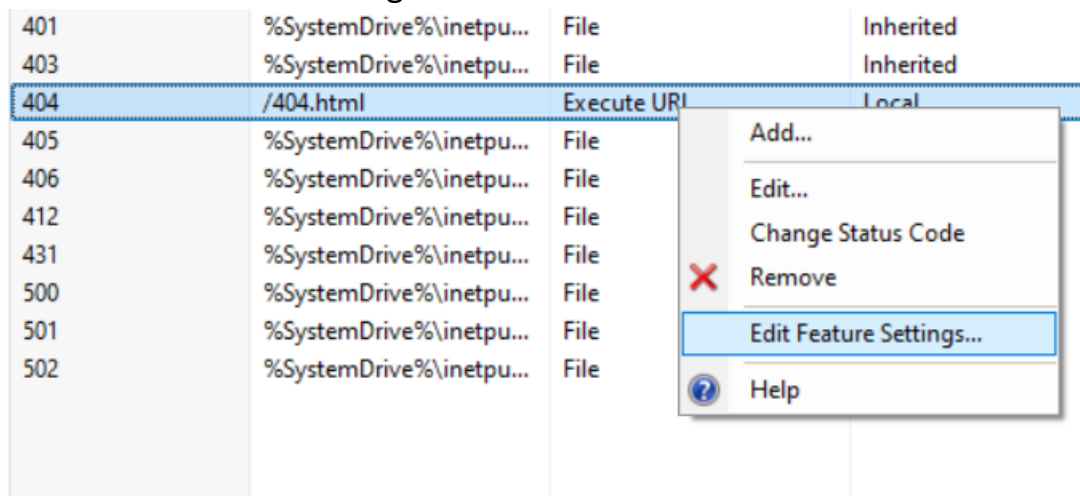

- When prompted: For Status Code, enter 404, Select Execute a URL on this site if you want dynamic content or choose File if it's a static page. In the URL field, type the relative path to your custom 404 error page (e.g., /404.html). Click OK.

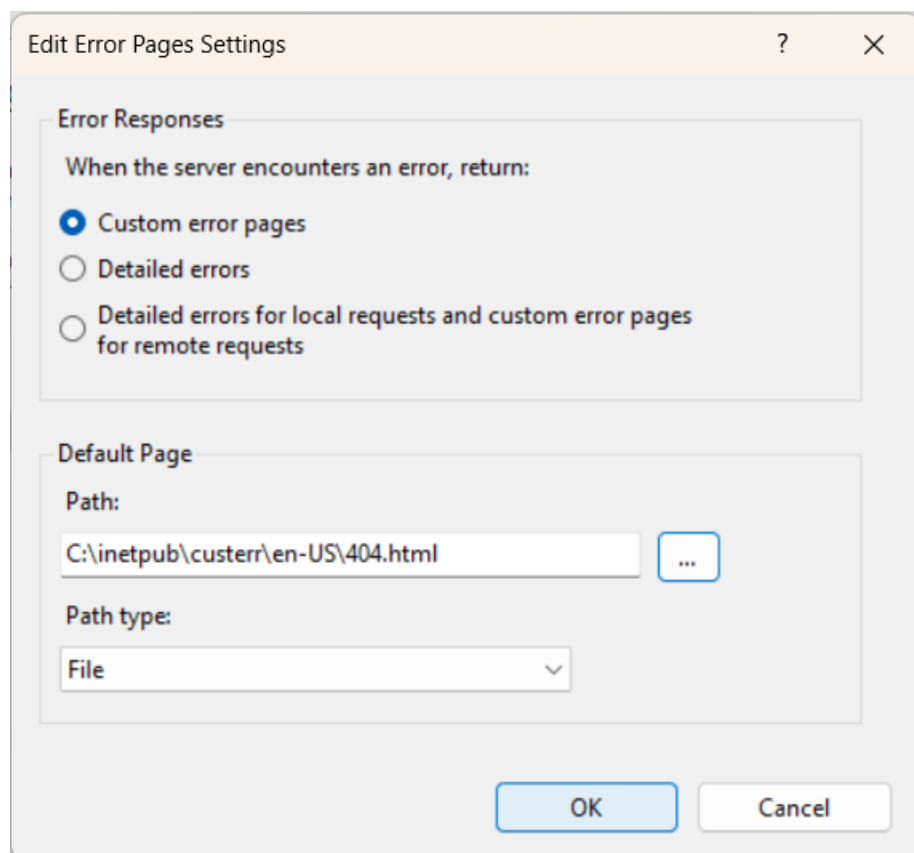

1.3. Edit Feature Settings

- Back in the Error Pages window, right-click the newly created 404 error and select Edit Feature Settings.

- Add the file path in IIS: Choose Custom error pages to ensure IIS uses your custom page. Enter the relative URL to the page and click OK.

1.4. Testing customized error 404 page

- Open your web browser and go to a non-existent page on your site (e.g., <https://yourwebsite.com/nonexistent-page>).
